

CASE STUDY: Before and after cable management installation.

Deli Express consulted with Communication Systems Specialists to create an organized look to their data cabling network.

The original cabling system was installed in the mid 1990's and still operates well with the current network requirements. However, the IT staff had a desire to organize the cable plant and better facilitate troubleshooting.

CSS used new Panduit PRV6 vertical and NCMHF1 horizontal management and new Belden Media-twist patch cables to create an organized and clean patching system.

Communication Systems Specialists (CSS) designs and installs structured cabling systems for commercial, industrial and educational markets.

Call us today or visit our web-site (www.css-mn.com) to request a proposal and see what CSS can do for your network. Whether installing new cabling or cleaning up an existing installation, CSS will provide a solution that is right for you and your budget.
