Abandoned Cabling Removal & Recycling

Over time, as new cabling is installed in the same pathways as old cable, those pathways become overcrowded, HVAC airflow is hampered, and fire risk rises. While some abandoned cable can, in fact, be retained if properly tagged for future use, not all abandoned cable meets the permitted-use criteria regardless of tagging. If abandoned cable fails to meet that criteria or is not properly tagged for future use, it must be removed.

Abandoned cable from previous tenants poses a unique challenge for property managers, since removal of it is the responsibility (and liability) of the property owner or manager if exiting tenants fail to do so. CSS currently provides various property management firms solutions to this problem. By removing abandoned cable, the marketability of the property for purchase or rental is enhanced.

Environmentally Sound:

When you contract with CSS, you can be confident that abandoned cable removed from your facility will be disposed of in an environmentally responsible manner. At CSS, we continually strive to make responsible decisions that will have positive impact on our communities and the environment, now and in the future. Providing

environmentally sound services to our customers is an important component of our business plan. A sustainable recycling program helps us keep waste out of landfills, prevents pollution, and protects our resources.

Let us help you address the abandoned cabling in your building to enhance the safety and performance of that space.

CSS will give every project, regardless of size, the same devotion to detail.

Free Consultation: If you are a Building Owner or Property Manager responsible for ensuring the fire safety and performance of your building's infra-

structure, call on CSS to be your communications partner. Whether for abandoned cabling removal and recycling or riser management, CSS is the Trusted Adviser you have been looking for.
