IP Video Surveillance System Design & Installation

Video Surveillance enhances the physical security of buildings, as well as the safety of staff, tenants, and visitors by offering a visual deterrent to crime, remote monitoring capabilities, and a means to record monitored areas. Recorded evidentiary video may be instrumental in the apprehension and prosecution of vandals and perpetrators of other crime occurring on a property. Regardless of type of incident, the immediate visual information provided by the cameras can be critical in determining a fitting course of action and prompt response.

CSS is pleased to provide design and installation of IP Video Surveillance System solutions as stand-alones or to complement IP Tenant Access Control Systems.

Video Surveillance: We partner with highly reputable manufacturers to ensure reliable, high-quality and reasonably-priced components. The security/surveillance industry is moving away from analog systems due to the many advantages of IP technologies. These technologies enable enhanced video analytics, greater transfer across network speed,

and equipment standardization not typically available in traditional analog systems. CSS still offers traditional analog Video Surveillance solutions for those owners and property managers who are looking to install, upgrade or replace an existing analog system.

Tenant Access Control: CSS also provides IP and Analog Tenant Access Control System solutions as a stand-alone system or to complement Video Surveillance.

CSS will give every project, regardless of size, the same devotion to detail.

Free Consultation: If you are a Building Owner or Property Manager responsible to ensure security for the building and its tenants, call on CSS to be

your communications partner. Whether for surveillance or tenant access control system solutions, CSS is the Trusted Adviser you have been looking for.
