Surveillance Solutions & Access Control Systems

Communication Systems Specialists (CSS) is pleased to offer Video Surveillance solutions and Tenant Access Control Systems. Regardless of type of multi-unit environment (office, medical, educational, retail, commercial, or housing), such properties must have access monitored and controlled to protect its tenants as well as the property itself. The growing variety of security technologies available can often make it difficult to choose a solution and what you want may at times differ from what you actually need for a particular property. CSS has the expertise to help you with that decision. Let us tailor a Video Surveillance System or Tenant Access Control System that is best suited to meet your property needs as well as your budget.

Hosted IP Tenant Access Control:

CSS provides hosted IP solutions for Tenant Access Control. The security industry is moving away from proprietary security hardware which can be costly to switch when outdated or no longer appropriate for the property. Hosted IP Tenant Access Control uses cloud technologies to reduce system complexity and provide users

easy, intuitive delegation of system administration at a lower cost than traditional access control solutions.

Surveillance: In addition, CSS provides IP Video Surveillance System design and installation services. Depending upon your property's needs, this can be a stand-alone solution or one that complements/integrates with Tenant Access Control.

CSS will give every project, regardless of size, the same devotion to detail.

Free Consultation: If you are a Building Owner or Property Manager responsible to ensure access/security for the building and its tenants, call on CSS to be

your communications partner. Whether for Tenant Access Control System or Surveillance solutions, CSS is the Trusted Adviser you have been looking for.
